ANKIT AGARWAL

Senior DevOps & Cloud Engineering Specialist | AWS | Terraform | CI/CD Automation | Infrastructure as Code | SRE

+91- 8977456016
linkedin.com/in/ankitagarwal94
ankitagarwalpro@gmail.com

Pursue engaging opportunities in the Information Technology field, emphasizing the application of substantial knowledge in DevOps Engineering, Site Reliability Engineering, and Cloud Engineering to improve operational processes and contribute to organizational growth. Open to relocation across India for optimal career opportunities.

Core Competencies

- Cloud Infrastructure Management
- Continuous Integration and Deployment
- Security Vulnerability Assessment
- Performance Optimization Strategies
- Containerization Best Practices
- Infrastructure Automation Techniques
- Monitoring and Observability Solutions
- Agile Methodologies
- Cross-Functional Team Collaboration
- Risk Management in IT Operations

Technical Skills

- **Cloud & Infrastructure:** AWS, Azure, Kubernetes, Terraform, Docker, Ansible, CMake, Packer
- **CI/CD & Automation:** Jenkins, GitHub Actions, JFrog Artifactory, Groovy, PowerShell, chocolatey
- **Monitoring & Logging:** Grafana, ELK Stack, SonarQube
- **Programming & Scripting:** Python, Shell Scripting
- **Version Control & Collaboration:** Git, GitHub
- **Database:** MongoDB
- **Dependency Management:** Conan, yarn, npm, uv, chocolatey

Certifications

- Completed DevOps certification in Madhapur, Hyderabad, in 2021, displaying expertise in modern

Profile Summary

- Strategic **DevOps & Cloud Engineering Leader** with ~10 years of experience designing, automating, and scaling **cloud-native, production-grade infrastructure** for global enterprises.
- Proven **Senior/Staff DevOps Engineer** with deep engagement at **Chamberlain Group**, delivering high-impact DevOps, SRE, and platform engineering initiatives across both client-based and direct employment models.
- Extensive expertise across **AWS cloud services** (EKS, EC2, VPC, Lambda, IAM, CloudWatch), **Infrastructure as Code** (Terraform, Ansible), **CI/CD platforms** (GitHub Actions, Jenkins, Bitbucket), **container orchestration** (Docker, Kubernetes), and **observability stacks** (Prometheus, Grafana).
- Strong track record of **modernizing CI/CD pipelines**, enabling reusable workflows, AMI automation, and policy-driven deployments aligned with DevSecOps and compliance standards.
- Actively leading and contributing to **AI/ML-driven DevOps and FinOps initiatives**, including predictive monitoring, intelligent alerting, cost-optimization accelerators, and internal AI platforms.
- Recognized for **hands-on leadership**, mentoring DevOps engineers, influencing architectural decisions, and bridging business objectives with cloud-native, SRE, and DevSecOps best practices.
- Results-oriented practitioner with a sustained focus on **cost optimization, operational resilience, deployment velocity, and governance**, delivering measurable ROI at scale.

Work Experience

Chamberlain Group | Senior / Staff DevOps Engineer
October 2025 – January 2026 | ***(Direct Employment)***

Role Overview:
Transitioned to direct payroll with Chamberlain Group, continuing the same senior DevOps role with **expanded ownership, architectural influence, and cross-team leadership**, while maintaining continuity of responsibilities and delivery.

Key Contributions:

- Led **advanced CI/CD modernization**, including the creation of **reusable GitHub Actions workflows** to trigger AMI builds directly from application pipelines, improving standardization and developer autonomy.
- Designed and developed a **custom MCP server for Cursor rules generation**, significantly improving developer productivity, coding consistency, and onboarding efficiency.
- Built an **AI-powered FinOps solution for AWS cost optimization** as part of an internal hackathon, leveraging usage analytics and predictive insights to drive smarter infrastructure spend.
- Delivered multiple **AI proof-of-concepts**, including a **RAG-based internal chatbot** supporting HR and administrative workflows.
- Continued ownership of AWS infrastructure automation, observability platforms, and DevSecOps practices across mission-critical environments.

Impact Highlights:

- Accelerated delivery consistency through standardized CI/CD building blocks.
- Expanded DevOps influence into **AI platform engineering and internal tooling innovation**.

R Systems International Pvt. Ltd. — Client: Chamberlain Group
Senior DevOps Engineer / Project Lead | June 2023 – October 2025

Role Overview:
Senior DevOps Engineer engaged via R Systems International, leading cloud automation, CI/CD transformation, and observability initiatives for Chamberlain Group's production platforms.

Key Responsibilities:

- Led **end-to-end AWS infrastructure automation** using Terraform, managing EC2, ASG, SSM, IAM, CloudWatch, and VPC components to ensure scalability, security, and reliability.
- Architected **GitHub Actions–based CI/CD pipelines** for automated AMI creation and deployment, eliminating manual dependencies and reducing release risk.
- Designed and implemented a **modern Prometheus-based monitoring framework** with version-controlled deployments, significantly improving Grafana visibility and metric accuracy.
- Automated **security vulnerability assessments and patching workflows**, aligning infrastructure operations with DevSecOps standards.
- Collaborated with application and platform teams to build **Python-based Lambda functions** supporting event-driven automation.

DevOps practices and tools.

Achievements

Top Performer of the Year at Chamberlain Group; received ₹20,000 cash award for outstanding contributions and performance excellence.

Architected AWS Auto Scaling Groups (ASG) using Terraform from inception, achieving annual cost savings of ~$60,000 and cutting production deployment time from days to hours.

Developed an NFT creation platform using ReactJS and NodeJS, along with an Android app for QR code creation and tracking—successfully launched on Google Play Store.

Built an algorithmic trading application with ReactJS, MongoDB, and Python; automated manual build processes via Jenkins for continuous integration and delivery.

Reduced release cycle time from multiple days to under 4 hours, enabling bi-monthly production releases.

Saved $210K annually by optimizing application architecture through in-house framework development, boosting system performance and efficiency.

Automated security scanning across builds, resolving over **15,000 vulnerabilities** within two months.

Winner – Hackathon 101, organized by Colruyt IT Consultancy and TechGig, awarded **₹20,000** for innovative solution development.

Personal Details

- **Date of Birth:** 20th Jan 1994
- **Languages Known:** English, Hindi, Telugu & German
- **Address:** Hyderabad, India

- Mentored a **2–3 member DevOps team**, driving best practices in IaC, pipeline optimization, and incident response readiness.
- Contributed to **AI/ML-driven DevOps POCs**, supporting predictive scaling and anomaly detection use cases.

Key Achievements:

- Reduced deployment time by **60%** through fully automated AMI pipelines.
- Improved observability and incident response effectiveness by **70%** via Prometheus–Grafana modernization.
- Achieved **20% infrastructure cost optimization** through Terraform standardization, tagging strategies, and automated scaling.
- Established the foundation for **predictive, AI-enabled operations** within monitoring and alerting workflows.
- Consistently recognized for **automation-first execution** and advancing DevOps maturity across the client ecosystem.

Colruyt IT Consultancy, Hyderabad
Role: Senior DevOps Engineer | Apr 2022 – Jun 2023
Project: Groovy Scripts for Automated Security Vulnerability Checks

Key Responsibilities:

- Automated security vulnerability assessments for high-risk applications using Groovy scripts, embedding the process within CI/CD pipelines.
- Integrated JFrog Xray to perform proactive scans and analyze application dependencies against CVSS v3 scores.
- Provided actionable remediation plans based on scan results, enhancing security posture and compliance adherence.

Key Achievements:

- Improved application security by **50%**, achieving **zero major security breaches** within the reporting period.
- Strengthened DevSecOps practices by embedding vulnerability checks directly into build and deployment pipelines.
- Reduced manual review time significantly while ensuring early detection and mitigation of risks.

Project: Migration of Amazon OpenSearch Service

Key Responsibilities:

- Led the migration of OpenSearch services between AWS accounts, ensuring data integrity, minimal downtime, and post-migration validation.

Key Achievements:

- Executed a seamless migration process, ensuring zero data loss and uninterrupted service continuity.

Role: DevOps Engineer | Dec 2021 – Apr 2022
Project: Deployment Script Optimization

Key Responsibilities:

- Optimized deployment scripts on Linux servers using Python and Paramiko to streamline execution and resource utilization.
- Utilized Git for version control and troubleshooting to ensure consistency and traceability in deployments.
- Achieved **4x faster deployment times**, accelerating release cycles and improving delivery efficiency.
- Enhanced CI/CD performance by refining script logic for parallel execution and automation.

Engineer – IT Infrastructure & Operations | Apr 2019 – Dec 2021
Project: Health Checks for Team Assets

- Automated routine health checks, reducing manual effort and error rates.
- Built a **Grafana dashboard** for real-time monitoring and quick issue resolution.

Project: SparkPost Operational Automation

- Automated backup, HTML data management, and email template monitoring using scripts.
- Enhanced reliability and efficiency of **SparkPost email template management**.

Associate System Engineer | Apr 2017 – Apr 2019
Project: SFB Sync Dashboard

- Developed dashboards to monitor real-time **Skype for Business user metrics** and response groups.
- Analyzed policy changes affecting user profiles to deliver timely operational updates.

Trainee System Engineer | Nov 2015 – Apr 2017
Project: Forcepoint Quarantine Mail Release Automation

- Integrated with **Forcepoint APIs** using Python to automate quarantined mail retrieval and release per security policies.

Education

Bachelor of Technology (Electronics & Communication Engineering), Anurag College of Engineering, Telangana – 2015

ANNEXURE

Organizational Projects

1. Migration of AWS Auto Scaling Group (ASG) Workloads to Kubernetes
Duration: 2024 – Present
Tech Stack: AWS (EKS, EC2, ASG, Lambda, CloudWatch), Docker, Kubernetes, Helm, Terraform, GitHub Actions, Bitbucket Pipelines
Highlights:

- Led the end-to-end migration of critical workloads from **AWS Auto Scaling Groups (ASG)** to **Amazon EKS (Kubernetes)**, enhancing scalability, reliability, and deployment agility.
- Replaced ASG lifecycle hooks with **Horizontal Pod Autoscaler (HPA)** and **Cluster Autoscaler**, enabling dynamic resource utilization and cost optimization.
- Implemented **Helm-based deployment strategies** with blue-green and rolling updates for seamless and zero-downtime releases.
- Automated CI/CD workflows using **GitHub Actions** and **Bitbucket Pipelines**, streamlining image build, push, and deployment processes.
- Strengthened system observability through **Prometheus and Grafana**, reducing mean-time-to-detect (MTTD) and improving operational resilience.
- Achieved measurable savings by reducing **infrastructure costs and deployment lead time** through optimized container orchestration.

2. AI/LLM Proof of Concepts – Enterprise Knowledge & Automation Tools
Duration: 2024 – Present
Highlights: Tech Stack: OpenAI API, AWS Bedrock, LangChain, OpenSearch, Pinecone, Slack/Teams SDK, FastAPI, OpenWebUI, MCP Protocol

- Designed and deployed **Retrieval-Augmented Generation (RAG)** chatbots for internal document querying across HR, IT, and device knowledge bases.
- Built intelligent **Slack and Microsoft Teams chatbots** integrated with enterprise data via **AWS Lambda** and **OpenSearch** for real-time knowledge retrieval.
- Developed **custom MCP servers** for JSON parsing, Kubernetes control, and artifact version management — enabling **LLM-driven DevOps automation**.
- Evaluated **OpenWebUI** and in-house AI orchestration frameworks for secure enterprise deployment of LLM applications.
- Architected **modular AI ecosystems** separating domain-specific knowledge (HR, IT, Devices) to ensure vendor-agnostic interoperability (ChatGPT, Claude, Bedrock).
- Delivered **live internal demonstrations** displaying measurable productivity gains and process automation via AI-assisted tools.
